

Case Study

Trial of New Phosphate Free products

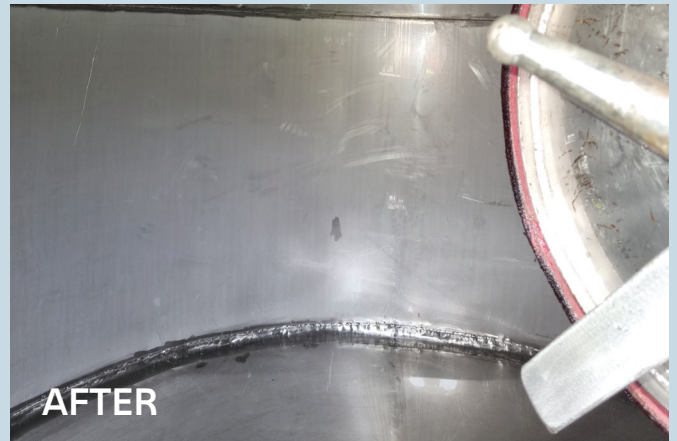

A cleaning trial was conducted on 20/12/2022 in a wine manufacturing facility of 2 x 14.2kL tanks that had moderate potassium bitartrate deposits and moderate tannin staining.

Results show that both surfaces are clean, glossy, smooth, free of debris, and have no residual foam.

Why go Phosphate-Free?

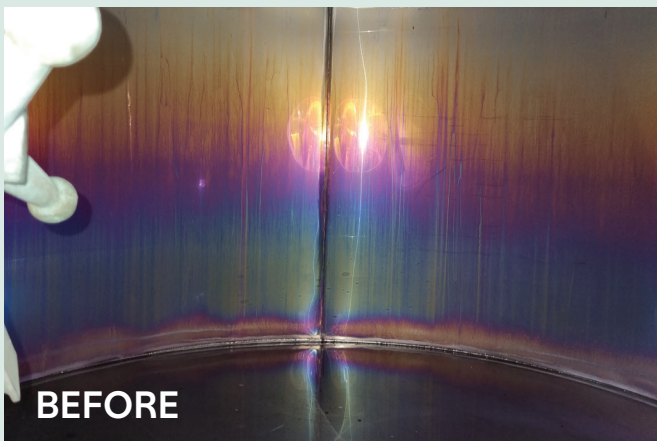

- Low foaming & fast rinsing for water conservation.
- Phosphates in waterways can contribute to eutrophication and harmful algal bloom.

VINCIRC PHOSPHATE FREE

Images showing inside of tanks before and after using 0.52% w/v Vincirc Phosphate Free cleaning via a venturi system with 200L of cold water for 20 minutes.

CIRCLEAN PHOSPHATE FREE
