

## → DESCRIPTION

A non-caustic powder used for CIP (Clean-in-Place) applications in wineries to remove tartrate deposits.

## → BENEFITS

- Low-hazard product that is much safer than caustic-based cleaners
- Requires less PPE when using
- Contains a special low foam surfactant to give rapid wetting and penetration of tartrate deposits
- Assists with brown film removal, especially if used during vintage
- Low foaming even when used through high pressure units such as Gamajet and Fury as well as CIP systems
- High levels of sequestrant gives rapid removal of built-up scale in tanks and equipment

## → APPLICATION

Vinclean is recommended for cleaning tanks in wineries to remove light to medium tartrate deposits. It can also be used to clean inside wine tankers.

## → DIRECTIONS FOR USE

### TARTRATE SOILING

Use the amounts shown below usage guide. After a while, the operators will be able to establish the optimum amounts needed for each tank. The thickness of the tartrate deposit can vary dependant on the age of the wine, type, how long it has been in the tank and process in use such as cold stabilisation. Waste storage tanks, for lees and must, may require higher concentrations of Vinclean.

Tank Size (L)	Light Deposit (kg)	Medium Deposit (kg)	Heavy Deposit
10,000	3kg	4kg	6kg
20,000	4kg	5kg	8kg
50,000	6kg	10kg	15kg
100,000	10kg	15kg	22kg
200,000	15kg	20kg	30kg
500,000	20kg	30kg	45kg

1. Mix with warm water to form a thin slurry before adding the tank. If added directly to the tank, the powder tends to clump, increasing the dissolution time. If the water is normally added to a 200L drum, then pumped in. Simply sprinkle the Vinclean into the drum whilst filling and then pump with the tank.
2. Circulate with sprayball or other system for 20-30 minutes.
3. Monitor by testing pH and by visual assessment. Maintain pH above 9 to ensure continued effectiveness.
4. Drain tank when clean, then rinse with water and finally a mildly acidic rinse. Vinclean is a cleaner not a sanitiser. If sanitising is required, sanitise tank using your preferred method.

### TANK CLEANING

Use Vinclean at dilutions from 1kg/100L (1% w/v) to 2kg/100L (3% w/v) dependant on the degree of soiling. Warm water is recommended for slurry preparation before adding to the tank.
