

## MANUFACTURER DECLARATION

Dominant Bacban has been evaluated by an independent third party laboratory for its bactericidal effectiveness as a chemical sanitiser.

The testing evaluation showed that Bacban has a >99.9% kill rate of bacteria when applied at ambient temperature on a hard surface at the recommended dilution as detailed in the Technical Bulletin/product label directions and left on the surface for at least 2 minutes.

Hard surfaces must be cleaned with a suitable detergent solution and rinsed with potable water before sanitising with Bacban.
