## Prepping Agent

Please read all directions thoroughly before proceeding. For further information about the full leather dyeing process and leather care, visit [www.leatherique.com.au](http://www.leatherique.com.au).

Leatherique® Prepping Agent Leather Deglazer #3 is the third stage in the restoration of damaged leather in readiness for application of Leatherique® Crack Filler and re-dyeing with Leatherique® Custom Dye, and is best undertaken following nourishing and cleaning your leather using Leatherique® Rejuvenator and Pristine Clean.

During the preparation process, you need to break down the top surface of the leather by light sanding. This is important so the new leather dye can bite into the leather to provide a natural appearance, and avoid a vinyl look from the heavy built of surface colourant and improper preparation.

### Materials

- Leatherique® Prepping Agent
- 600 grit wet and dry sandpaper
- Microfibre cloth or paper towel

### Application

- Spray Prepping Agent onto 600 grit wet and dry sandpaper and onto the leather to be dyed.
- Sanding with the grain, lightly wet sand the leather to smooth out any cracks and hangnails in the surface.
- Wipe the surface regularly with soft rags or paper towel to remove as much of the faded or oxidised old leather dye as possible.
- Ensure you keep your sandpaper wet.
- Be careful not to over sand and create a suede effect.
- Re-sand with 600 grit and wipe the surface clean with a dry paper towel.

### Crack Filling

- If Crack Filling of the leather is required, lightly wet sand the crack using Prepping Agent and 600 grit wet and dry sandpaper on its edge.
- Allow cracks to dry before application of Crack Filler
