

PAN-GEL

GELTABS

DESCRIPTION

A **PAN-GEL** tablet forms a time release gel when it comes into contact with water. The gel acts to adhere the tablet to the pan locking it in place and immediately starts releasing the long lasting aggressive cleaning action chemical AT-8.

AT-8 removes contamination in the condensate system creating a secure air supply when in use. The tablet continues to dissolve for months requiring no further maintenance, leaves no residue and nothing to remove or throw away.

Pan-Gel is safe to use as directed in all types of pans, including metal or fibreglass constructions and painted surfaces. The easy to use premeasured tablets prevent accidental spilling of liquid agents and store conveniently.

AT-8 chemical is safe, non-toxic and non-corrosive when used as directed and is approved for use in computer room environments.

APPLICATIONS

Hospitals, Hotels, Motels, Food Preparation Areas, Office Buildings, Schools, Nursing Homes, Apartments and Industrial Plants.

LABEL INFORMATION

Tablet locks into place, starts working immediately, dissolves completely and leaves nothing to throw away. Releases slowly and continuously, does not release any chlorine or other noxious or toxic fumes and prevents costly repairs.

DIRECTIONS FOR USE

One tablet lasts for up to three months.

Place tablet directly in the condensate pan.

Position the tablet so that moisture condensing on the pan evaporator coil drips on or runs over the Pan-Gel tablet.
