

CHILL

WASP KILLER INSECTICIDE

DESCRIPTION

CHILL wasp killer insecticide is an NRA registered insecticide spray which contains 1.3g/kg d-Allethrin and 1.2kg d-Phenothrin.

CHILL wasp killer insecticide has been developed to kill wasps on contact. Best results are achieved morning and evening when all adults are in the nest.

Sprays between 3 to 4 metres.

APPLICATIONS

Outdoor control of wasps in domestic, commercial and industrial areas.

TECHNICAL DATA

FORM: Solvent Base Aerosol
ODOUR: Solvent
COLOUR: Clear
SPECIFIC GRAVITY: 0.93
TOXICITY: TWA 5ppm
WETTING ABILITY: Saturates
STORAGE ABILITY: 1 year +
STABILITY: Stable
PHOSPHATES: None

FLASH POINT: > 75°C tag closed cup
BOILING POINT: 16°C @ 760mm
SOLUBILITY IN WATER: Not miscible
PROPELLANT: Carbon Dioxide
%VOLATILE BY VOLUME: 100%
pH: None
VISCOSITY: Thin
EVAPORATION RATE: Rapid
BIODEGRADABILITY: No

DIRECTIONS FOR USE

Shake can before use. Best results are obtained if the pests are contacted directly. Treat in early morning or evening when the pests are in their nest.

Wind should always be at back of user and blowing toward the object being treated. For optimum performance, if treating overhead, align actuator spout with mark on valve cup. If treating down, align actuator spout to be directly opposite mark on valve cup. Hold container in an upright position to treat. Stand a safe distance, about two metres, from the nest and not directly underneath. Use sweeping motion to saturate nests.
